DETAILED ACTION

Receipt is acknowledged of applicants' IDS (filed on 10 June 2004); supplemental IDS (filed on 28 June 2005); and response to restriction requirement (filed on 16 July 2007).

.

Election/Restrictions

Applicants' election with traverse of Group I and claim 11 in the reply filed on 16 July 2007 is acknowledged. The traversal is on the ground that no additional work is required for examination of all the claims. This is not found persuasive because a search burden exists since elements exist in each of the groups which require searches in areas not required for the other groups.

The requirement is still deemed proper and is therefore made FINAL.

Claims 10 and 12-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 16 July 2007.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Application/Control Number: 10/783,024

Art Unit: 1615

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Application No. 2005/0215528 ("Furuya").

Furuya discloses a pharmaceutical composition comprising selective estrogen receptor modulator (SERM) drugs (see paragraph 0006). The disclosed composition is comprised of:

- the solid drug formulation of instant claim 1 (see paragraph 0070);
- the granulates of instant claim 1 (see paragraph 0447);
- the compound of formula 1 (see paragraph 0125);
- the intra-granular excipients of instant claim 1 (see paragraph 0449);
- the ospemifene of instant claim 2 (see paragraph 0125);
- the disintegrant of instant claim 3 (see paragraph 0448);
- the diluent (lactose) of instant claim 4 (see paragraph 0070);
- the binder of instant claim 5 (see paragraph 0448);
- the excipient combination of instant claim 6 (see paragraph 0448);
- the carboxymethylcellulose of instant claim 7 (see paragraph 0452);
- the lactose of instant claim 8 (see paragraph 0070); and
- the dextrin of instant claim 9 (see paragraph 0451).

The wet granulation process disclosed in claim 11 is not essential to a determination of patentability of the composition disclosed in the claim. The patentability of product-by-process claims is based on the product itself. "[E]ven though

Application/Control Number: 10/783,024

Art Unit: 1615

product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). In any event, Furuya discloses a wet granulation process (see paragraph 0494).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Application No. 2005/0215528 ("Furuya").

Furuya discloses a pharmaceutical composition comprising selective estrogen receptor modulator (SERM) drugs (see above).

Furuya explains that the disclosed composition is beneficial as a "...preventative of therapeutic method capable of improving preventative or therapeutic effect of a GnRH agonist on various diseases..." See paragraph 0003.

While Furuya does not explicitly teach the particle sizes of instant claims 21-23, it would have been obvious to a person of ordinary skill in the art at the time the invention

Art Unit: 1615

was made to determine suitable particle sizes through routine or manipulative experimentation to obtain the best possible results, as these are variable parameters attainable within the art.

Moreover, generally, differences in particle size will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration is critical. "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." *In re Aller*, 220 F.2d 454, 456; 105 USPQ 233, 235 (CCPA 1955). Applicants have not demonstrated any unexpected or unusual results, which accrue from the instant particle sizes.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Application/Control Number: 10/783,024

Art Unit: 1615

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9, 11, and 21-23 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of copending Application No. 11/592,989 ('989). Although the conflicting claims are not identical, they are not patentably distinct from each other because '989 claims a drug formulation comprising ospemifene (see claims 1 and 2).

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
